

A report on the results of the load testing

Prepared by Alexey Makovski

Operating system: Ubuntu (64-bit).

Web server: Apache.

Relational database management system: MySQL.

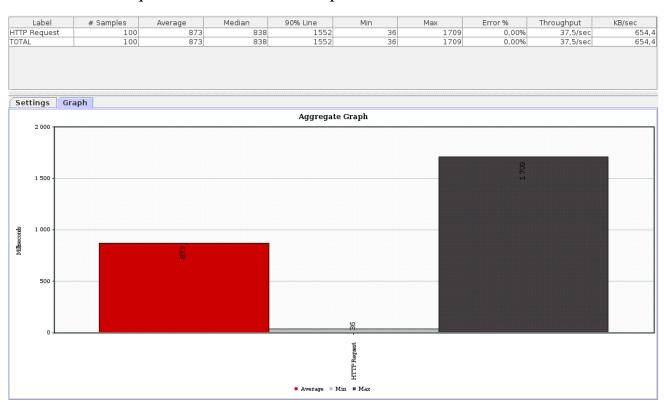

Runtime: PHP.

Content management system: WordPress.

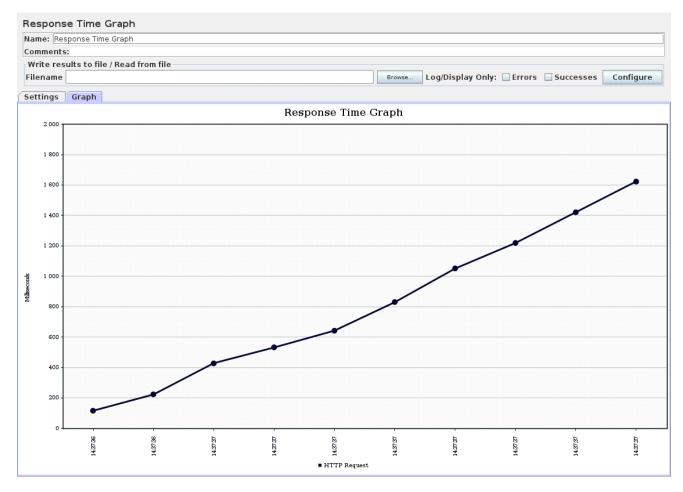

Test perform software: Apache JMeter.

Conducted stress testing site http://localhost/

Emulated user requests with different time period and different number of users.

Graphics № 1 User - 100, time - 1 seconds.

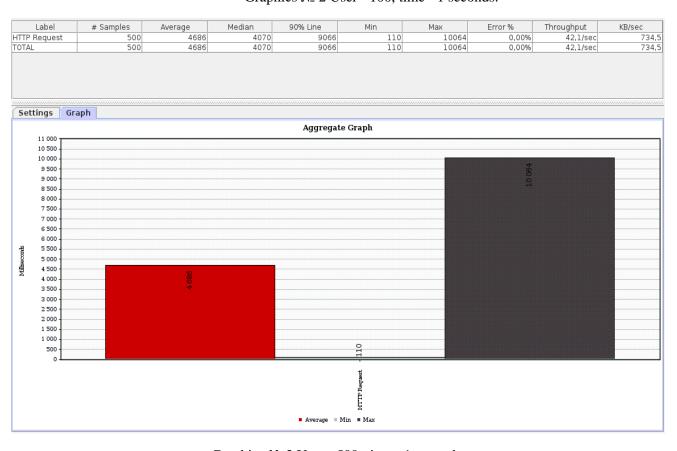

Graphics № 2 User - 100, time - 1 seconds.

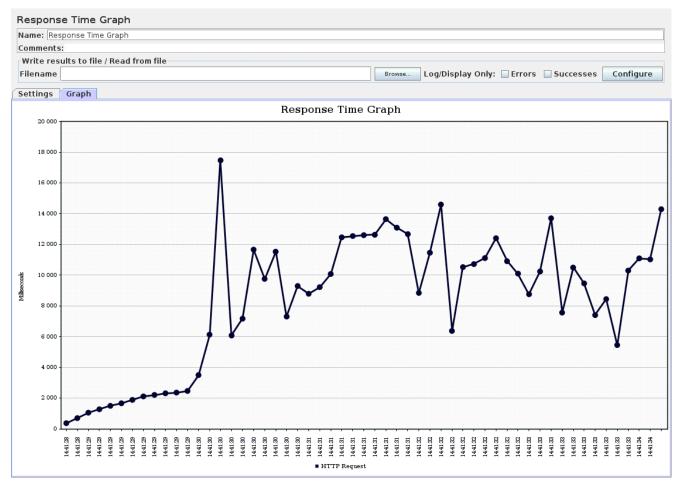

Graphics № 3 User - 500, time - 1 seconds.

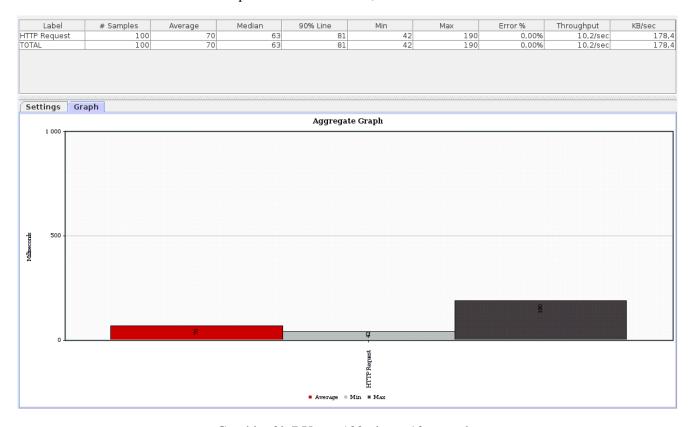

Graphics № 4 User - 500, time - 1 seconds.

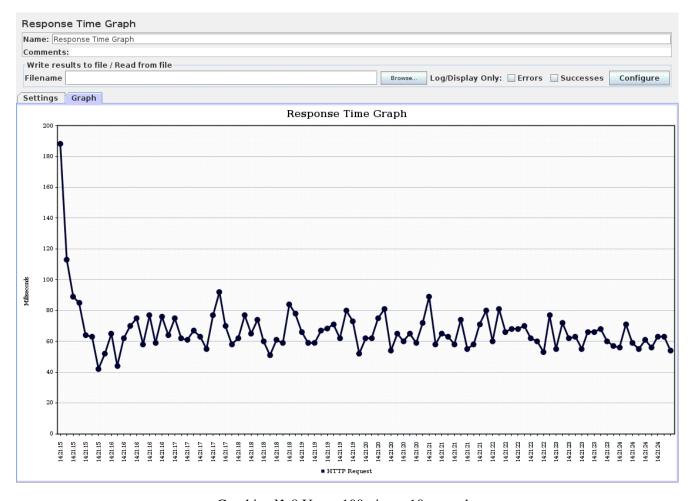

Graphics № 5 User - 1000, time - 1 seconds.

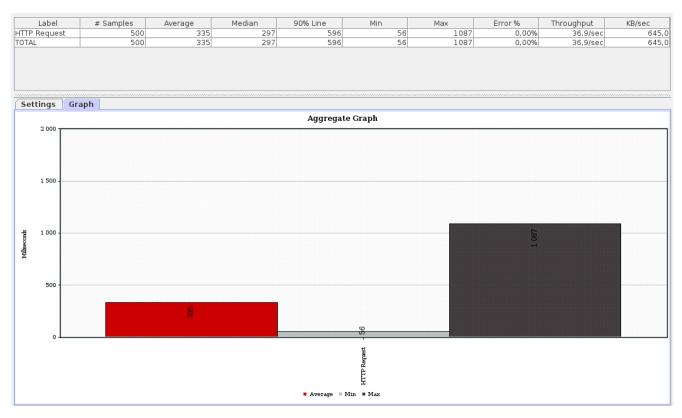

Graphics № 6 User - 1000, time - 1 seconds.

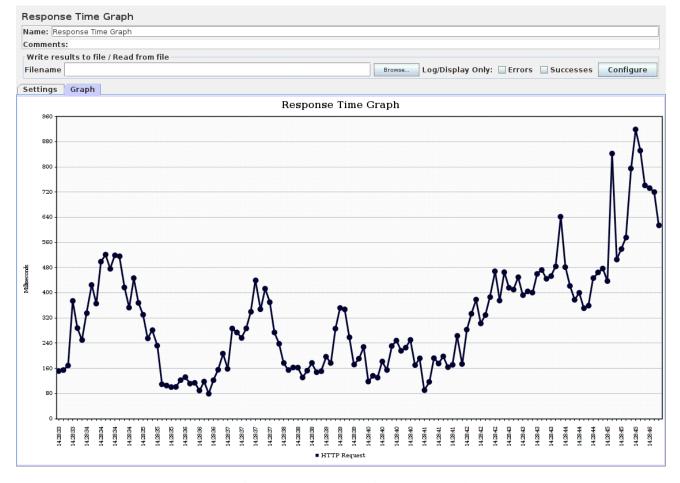

Graphics № 7 User - 100, time - 10 seconds.

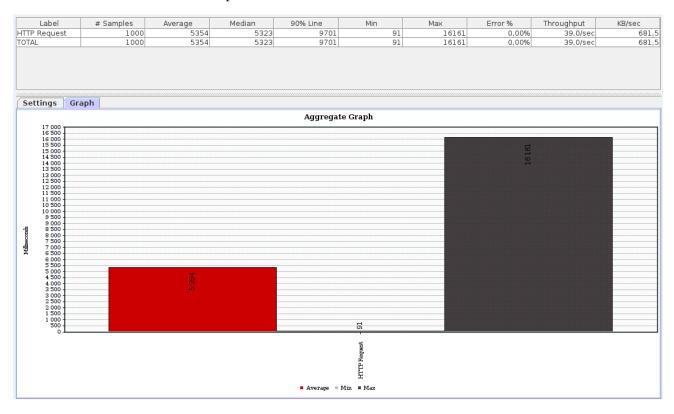

Graphics № 8 User - 100, time - 10 seconds.

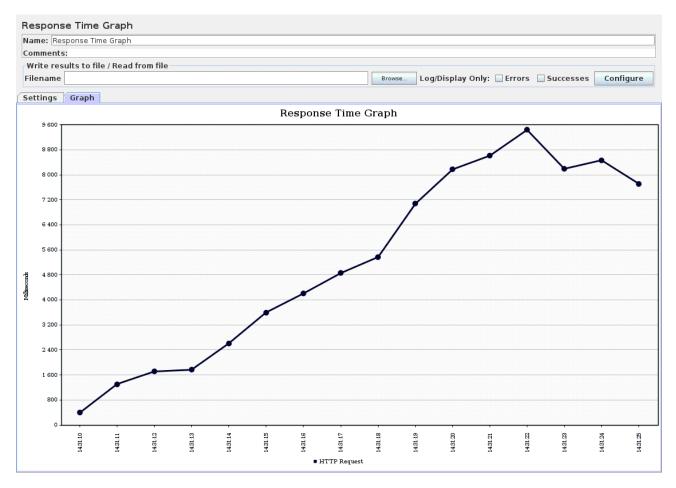

Graphics № 9 User - 500, time - 10 seconds.

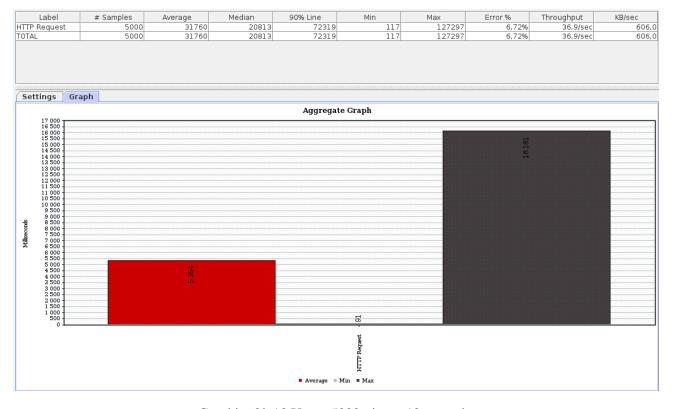

Graphics № 10 User - 500, time - 10 seconds.

Graphics № 11 User - 1000, time - 10 seconds.

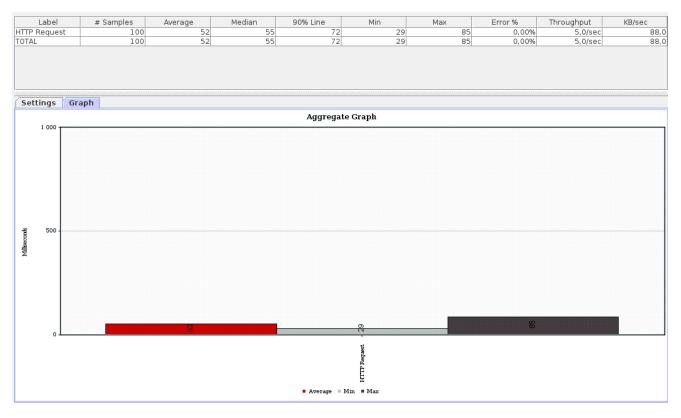

Graphics № 12 User - 1000, time - 10 seconds.

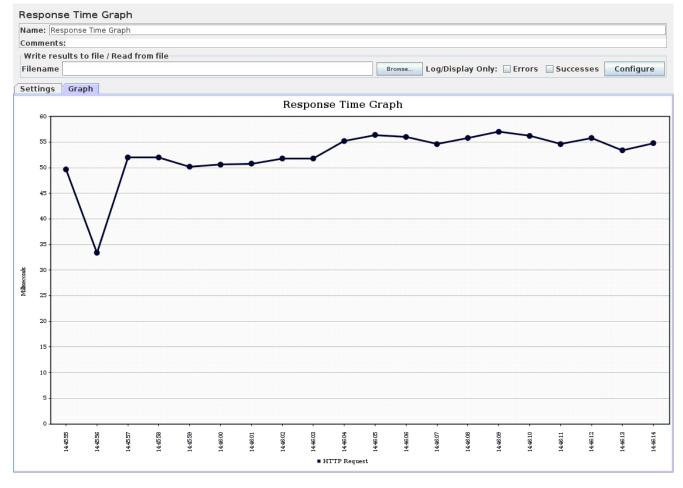

Graphics № 13 User - 5000, time - 10 seconds.

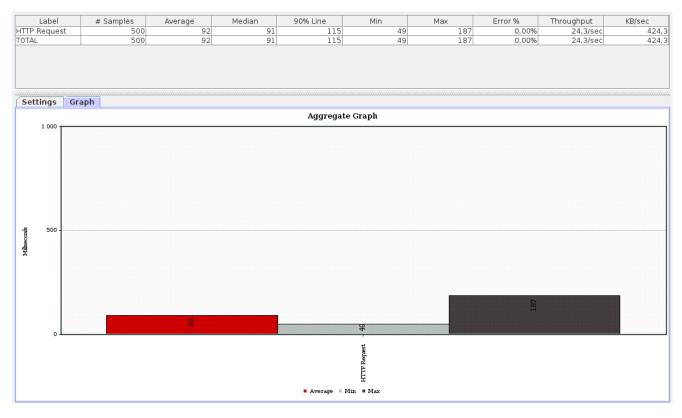

Graphics № 14 User - 5000, time - 10 seconds.

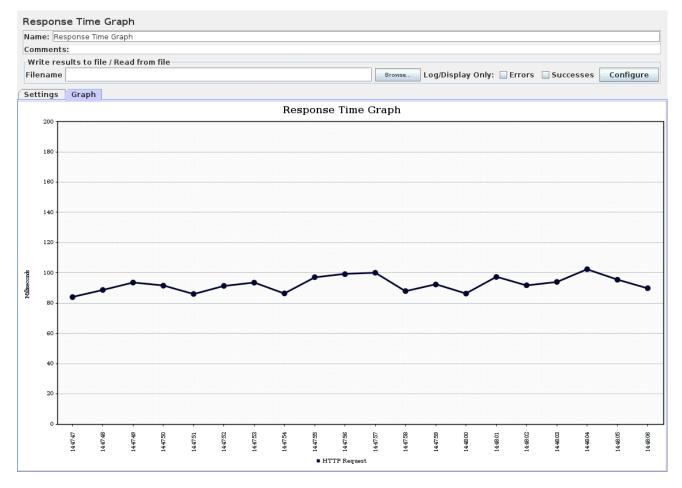

Graphics № 15 User - 100, time - 20 seconds.

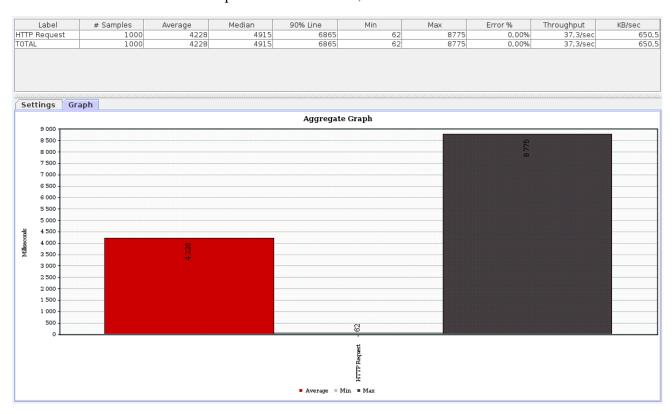

Graphics № 16 User - 100, time - 20 seconds.

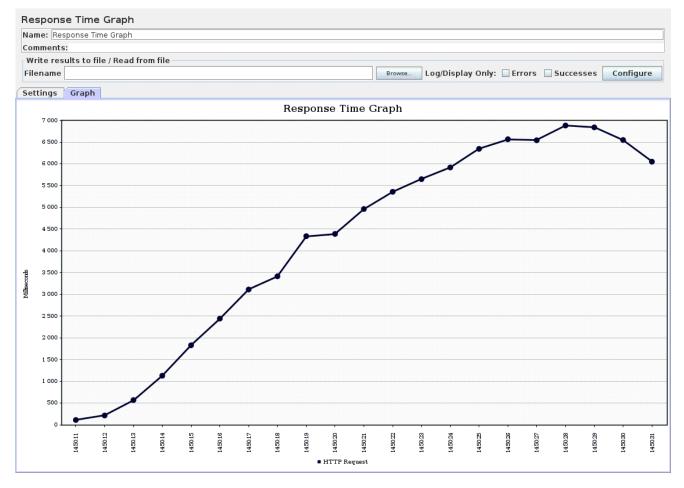

Graphics № 17 User - 500, time - 20 seconds.

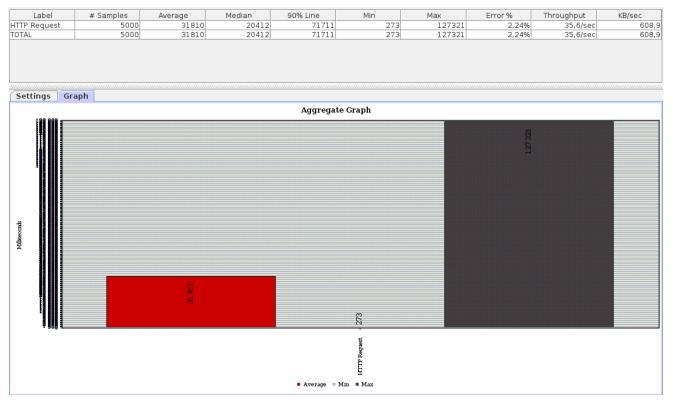

Graphics № 18 User - 500, time - 20 seconds.

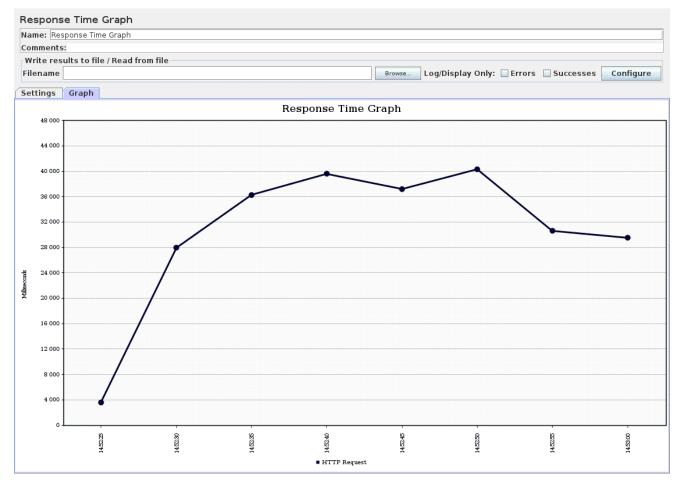

Graphics № 19 User - 1000, time - 20 seconds.

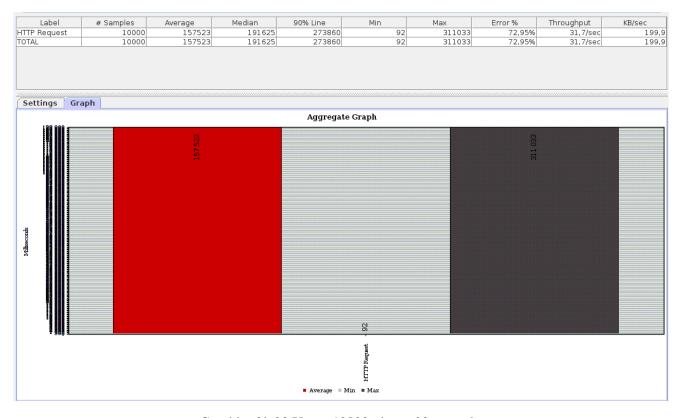

Graphics № 20 User - 1000, time - 20 seconds.

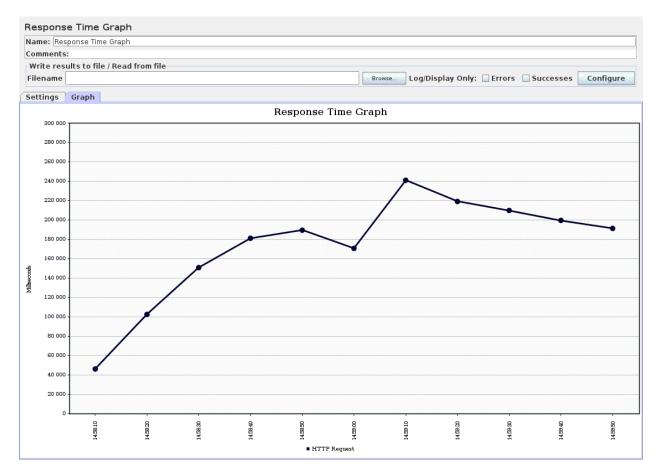

Graphics № 21 User - 5000, time - 20 seconds.

Graphics № 22 User - 5000, time - 20 seconds.

Graphics № 23 User - 10000, time - 20 seconds.

Graphics № 24 User - 10000, time - 20 seconds.

Recommendation:

Test results indicate a problem with response to user requests after concurrent 3500 for 10 seconds period. Increase server performance.
